Noninvasive R.F. Lipoplasty
(LipoTron-3000 / Adipo-Tolysis)

What is Noninvasive R.F Lipoplasty?

Conventional liposuction is the invasive cosmetic plastic surgical procedure to remove pockets of fat that has not responded to diet and exercise. Also, invasive liposuction was not intended as a means for weight loss or obesity treatment.

RevecoMED introduces patented RF deep endogenous dermal heating method that provides subcutaneous fat and visceral fat removal at the same time.

Lipotron-3000/Adipo-Tolysis is a revolutionary Radio Frequency Assisted Lipoplasty (RFAL) System to offer a noninvasive procedure. This procedure has no downtime, side effect, fatigue and maintenance.

Who is a good candidate?

1. An individual who has already tried diet and exercise but have problem areas of excess fat in specific areas, such as hips and buttocks, thighs, inner knee, back, abdomen, upper arms, cheeks, jowls, breast/chest area, and waist.

2. People who don’t want to undergo invasive liposuction surgery.

3. Obesity patient who is abnormal weigh range (BMI over 30)

4. People who had a liposuction surgery and need maintenance

What is treatment procedure and feel like?

The treatment procedure is like thermal therapeutic massage which is very comfortable to patient and operator. No anesthetic material. No contradictions.
